- **The Catch:** While mathematically sound in theory, a long losing streak can quickly tire a gamer's bankroll or strike the gambling establishment's maximum bet limitation.

2. The Anti-Martingale/ Paroli Strategy (Medium Risk)

- **How it works:** The gamer doubles their bet after every *win* and goes back to the original base bet after a loss.
- **Application in Limbo:** Ideal for riding hot streaks while lessening exposure during cold streaks.
- **The Catch:** Relies completely on stringing consecutive wins together.

3. The Fixed Target Strategy (Controlled Risk)

- **How it works:** The gamer keeps both the bet size and the target multiplier similar for each single round (e.g., constantly betting £ 5 on a 5.00 x multiplier).
- **Application in Limbo:** This is the most mathematically trouble-free way to play. It permits gamers to calculate their anticipated session period and manage their bankroll effectively without emotional decision-making.
