What is the Limbo Crypto Game?

At its core, Limbo is a crash-style game influenced by the traditional "high-low" or multiplier mechanics found in early cryptocurrency betting platforms. Unlike conventional slots that feature spinning reels and complicated paylines, Limbo presents the player with a single, tidy interface: a target multiplier and a win chance.

The premise is straightforward:

1. The gamer puts a wager in their selected cryptocurrency (e.g., Bitcoin, Ethereum, GBPT, or Dogecoin).
2. The player sets a **target multiplier** (e.g., 2x, 10x, 100x, and even 1,000,000 x).
3. The game creates a random multiplier outcome.
4. If the created multiplier is **higher than or equivalent to** the target multiplier, the player wins. If it fails, the bet is lost.

Due to the fact that the game is hosted on crypto platforms, nearly every credible version of Limbo is **provably reasonable**. This indicates players can individually confirm the cryptographic hash of every round to guarantee the casino did not manipulate the result.

The Core Equation

For example, on a platform with a 1% home edge:

- If a player sets a target of **2.00 x**, the win opportunity is roughly **49.5%**.

- If a gamer sets a target of **10.00 x**, the win opportunity drops to **9.9%**.
- If a gamer sets a target of **100.00 x**, the win opportunity plummets to **0.99%**.
