

Weekends can affect the exchange rate and fees applied when you pay for an international gift. The effect depends on your payment provider, the time the payment is processed, and the currencies involved.

Why weekend rates can differ

Major foreign exchange markets generally close for the weekend. During that period, a payment provider may use the most recent available rate rather than a rate based on active market trading.

Some providers add a weekend markup to account for the risk that the rate could move before markets reopen. Others may use a rate that already includes a margin. The margin is the difference between the rate offered to you and a reference rate; it is not always shown as a separate fee.

A weekend markup is not universal. Check the terms for the card, bank account, or transfer service you plan to use. A provider may define its weekend period differently from your local Saturday and Sunday.

Payment and delivery timing

The time you place a gift order is not necessarily the time its payment is converted. A seller may authorize a card payment when you order and complete the charge later. The rate used for the completed transaction can differ from the rate you saw at checkout.

Bank transfers can also take longer around weekends and public holidays. Some services show a rate before you confirm a transfer and state how long that rate is guaranteed. Others may determine the final rate later. Read the confirmation screen to see what applies.

Delivery timing is a separate issue. A flower order might be delivered on a weekend even if payment processing or a bank transfer finishes on a later business day. A delivery date does not tell you which exchange rate will apply.

How to check the gift cost

Before paying, look for the amount in the seller's currency and the estimated or guaranteed amount in your own currency. Check for a foreign transaction fee as well as any stated conversion fee or markup. Your card issuer's terms can explain charges that do not appear on the seller's checkout page.

If a checkout offers to charge you in your home currency, it may be using a service called dynamic currency conversion. Compare its displayed rate and charges with your card provider's terms before choosing. Paying in the seller's currency usually leaves conversion to your card provider, but that does not automatically make it cheaper.

Keep the order confirmation and check the completed charge. If a gift is refunded, the amount returned in your currency can differ from what you paid because the exchange rate or fees may have changed.

Questions about weekend conversions

Is it always cheaper to pay on a weekday?

No. A weekday may avoid a provider's weekend markup, but exchange rates move and other fees can still apply. Compare the total cost rather than relying on the day alone.

Can I lock in a rate for a weekend gift?

Some transfer services offer a guaranteed rate for a stated period. Check the conditions and expiry time before sending payment, since a displayed estimate is not necessarily a guarantee.
