The Great Migration arrives in the Mara roughly July and stays through October, but the river crossings are not a daily event. Herds gather, hesitate and move in bursts, and a single day can pass with nothing happening.

The Mara and Talek rivers are the usual crossing points, with the northern conservancies seeing the earliest action. A guide with **mombasa to masai mara fly in safari** current information matters ***Mombasa-based Masai Mara safari*** more than a fixed itinerary.

Expect crowds at the prime crossing sites in August. Booking a conservancy camp gives quieter viewing of the same herds. Treat crossings as a bonus, not a guarantee, and plan at least three nights. Current migration notes are at %LINK%.
