Stemming greatly within the cryptocurrency casino sector, the game is constructed around a single premise: **picking a target multiplier and hoping the arbitrarily produced result fulfills or exceeds that target.**

Unlike standard slots with intricate paylines or blackjack with deep strategic charts, Limbo strips gambling down to pure numbers. There are no flashing lights, themed signs, or narrative arcs. Rather, gamers are welcomed by a clean user interface featuring a target multiplier input box, a bet amount selector, and a popular "Bet" button.

How a Standard Round Works:

1. **Set the Bet:** The gamer chooses just how much currency to bet on the round.
2. **Pick a Target Multiplier:** The gamer selects their preferred payout multiplier (e.g., 2.00 x, 10.00 x, or even 1,000,000 x).
3. **Roll the Dice:** The player initiates the round.
4. **The Outcome:** The game's random number generator (RNG) produces an outcome. If the produced multiplier is *equivalent to or greater* than the target, the gamer wins their bet increased by the target. If it falls short, the stake is lost.

Comprehending the Mechanics and House Edge

To the unaware, the enormous prospective payouts in Limbo can seem too great to be real. However, the game operates on rigorous mathematical possibilities. Every target multiplier has a corresponding win possibility.

[Target Multiplier|Win Probability (Approx. with 1% House Edge) ||:-- |:--|| **1.01 x**|98.02% | **2.00 x**|49.50% | **5.00 x**|19.80% | **10.00 x**|9.90% | **50.00 x**|1.98% | **100.00 x**|0.99% | **1,000.00 x**|0.099%|
