At its core, the Towers game is a variation of the timeless "minesweeper" category popular at modern online crypto casinos. Several of these tiles consist of a covert trap (typically represented as a monster, a bomb, or a skull), while the others include a safe multiplier.

If the gamer picks a safe tile, their overall bet is multiplied, and they can select to either cash out their winnings or continue to the next row. If they hit a trap, the round ends immediately, and the initial stake is lost.
