1. The gamer puts a wager.
2. The gamer sets a **Target Multiplier** (e.g., 2x, 10x, 100x, or even 1,000,000 x).
3. The game generates a random number (the outcome).
4. If the created outcome is **greater than or equivalent to** the target multiplier, the gamer wins! If it falls below, the wager is lost.

Every round of Limbo is governed by a basic mathematical formula tied to your house Edge. Typically, your home edge in Limbo ranges from **1% to 2%**, which is significantly lower than conventional casino video games like American roulette or traditional slots.

The Win Probability Formula

The possibility of winning a Limbo bet is inversely proportional to the multiplier chosen. The formula to determine the win opportunity **limbo crypto game real money** is normally:

$$\text{Win Chance (\%)} = \frac{100}{\text{Target Multiplier}} \times (100 - \text{Home Edge})\%$$

(Note: With a basic 1% home edge, a 2x multiplier yields roughly a 49.5% possibility of winning.)
