- **How it works:** After every loss, the player doubles their bet. When they eventually win, the profit covers all previous losses plus a revenue equivalent to the initial base bet.
- **Application in Limbo:** Best used with a conservative target multiplier, such as **2.00 x**.
- **The Catch:** While mathematically sound in theory, a long losing streak can quickly exhaust a player's bankroll or strike the gambling establishment's maximum bet limit.

2. The Anti-Martingale/ Paroli Strategy (Medium Risk)

- **How it works:** The gamer doubles their bet after every *win* and reverts to the original base bet after a loss.
- **Application in Limbo:** Ideal for riding hot streaks while reducing direct exposure during cold streaks.

- **The Catch:** Relies completely on stringing consecutive wins together.

3. The Fixed Target Strategy (Controlled Risk)

- **How it works:** The player keeps both the bet size and the target multiplier identical for each single round (e.g., always betting £ 5 on a 5.00 x multiplier).
- **Application in Limbo:** This is the most mathematically stress-free method to play. It enables gamers to calculate their expected session duration and manage their bankroll efficiently without emotional decision-making.
