Gamers obtain skins primarily by opening randomized loot boxes called "cases" utilizing paid secrets, or by getting random drops after matches. Since some skins are exceptionally unusual, a supply-and-demand market quickly formed on the Steam Community Market.

Quickly, third-party sites understood that these digital items held real-world monetary value. By using application shows interfaces (APIs) provided by Steam, designers produced platforms where gamers might deposit their virtual skins and use them as chips to play casino-style games. Even with the shift from CSGO to CS2, this economy has remained largely undamaged and fiercely active.
