What is the Towers Game?

At its core, the Towers game is a vertical development game inspired by the timeless concept of climbing a structure while avoiding hidden threats. Gamers exist with a grid-- normally represented as a series of rows and columns-- forming a tower.

The primary objective is simple: **choose a tile in each row to climb up higher.**

- Each successful step up increases the multiplier, thereby increasing possible jackpots.
- Picking the incorrect tile activates a "loss" (typically represented by a trap, a gargoyle, or a collapsing block), resulting in the loss of the current round's stake.

The beauty of the game lies in its adaptability. Gamers can pick to squander at any time, locking in their present multiplier, or press their luck for a greater payment.

Gameplay Mechanics and Difficulty Levels

One of the defining functions of the Towers game is its personalized risk profile. Before beginning a round, players generally choose a trouble mode. This dictates the grid size (variety of columns per row) and the ratio of safe tiles to surprise risks.

Trouble Mode	Grid Layout (Cols x Rows)	Safe Tiles per Row	Threat Level	Max Potential Multiplier
Easy	4 x 9	3	Safe/ 1 Trap Low	Moderate
Medium	3 x 9	2	Safe/ 1 Trap Medium	High
Tough	2 x 9	1	Safe/ 1 Trap High	Extremely
Expert	3 x 9 (Multiple Traps)	1	Safe/ 2 Traps	Extreme
				Huge

The flexibility of these modes allows both conservative players-- those who prefer constant, incremental gains-- and high-risk thrill-seekers to find a playstyle that suits them.
