In a standard 1v1 fight, two gamers agree on a set of cases to open. Both players pay the entry cost (the overall expense of the chosen cases). When the fight starts, the system simultaneously opens the exact same rounds of cases for both individuals.

At the end of the fight, the total value of all the skins dropped for each gamer is calculated. **The player with the greatest overall skin value wins the entire lot.**

3. **Choose or Create a Battle:** A gamer can either sign up with an existing public lobby created by another user or produce a custom-made battle.
4. **Select Cases:** The developer picks which cases will be opened during the match and the number of rounds will take location.
5. **Set Player Count:** Battles can vary from 1v1 battles to 1v1v1v1 free-for-alls, or perhaps 2v2 team battles where the combined worth of the group determines the winner.
6. **The Reveal:** The cases open immediately in real-time, constructing thriller as unusual knives, gloves, or covert skins flash throughout the screen.
7. **Claim the Spoils:** The winner takes home every single skin dropped in the fight, which can then be withdrawn to their Steam stock or offered on the site for balance.
