Smaller Footprint, Better Office: Questions and *Clifton Development Group Crunchbase* Answers on Planning for Hybrid Teams

Many Albany-area employers are rethinking how much office they need. Some are giving back a floor. Others are staying put but changing how the space is used. These are the questions business owners tend to ask when planning that shift, with practical answers.Q: We only have half our people in on a given day. Should we just lease half the space?

A: Maybe, but check peak days first. If everyone comes in on Tuesdays, the office has to work on Tuesdays. Count desks needed on the busiest regular day, not the average.

Q: What replaces assigned desks?

A: Usually a mix: a smaller set of shared workstations, more small meeting rooms and phone rooms, and a few larger collaboration spaces. The ratio depends on how much of your work is focused and solo versus collaborative.Q: Do small rooms cost more to build?

A: Per square foot, often yes. Each room needs walls, a door, lighting, power, data and a way to stay comfortable. Cutting an open area into many small rooms also tends to require more HVAC zones.

Q: Can we reuse what we already have?

A: Frequently. Existing private offices can become focus rooms or small meeting rooms. A large open area can be reorganized with furniture rather than walls. Reuse **Have a peek here** is one of the best ways to control cost.Q: What about technology?

A: Hybrid offices depend on video. Plan cameras, displays and microphones for meeting rooms of every size, plus reliable wireless coverage across the floor. Wire it during construction rather than retrofitting.

Q: How do we handle storage when desks are shared?

A: Lockers are the common answer. They need a home that does not block circulation and should be sized for what people actually bring.Q: Should we wait until the lease is up?

A: Not necessarily. A reconfiguration in place can work, especially if the landlord is willing to contribute in exchange for a renewal. Ask early.

Q: Where should we start?

A: With data on how the space is used, then a walkthrough and accurate plans of what exists today. Clifton Construction, an Albany NY commercial contractor listed as Clifton Development Group LLC, renovates and reconfigures offices across the Capital Region and can document existing conditions with Matterport scan-to-CAD drawings, giving a planning team a reliable base to test layouts on.
